PROFESSIONAL SUMMARY

Independent digital product builder focused on creating practical web-based solutions using modern development tools and AI-assisted workflows. Experienced in turning ideas into functional digital platforms, managing projects independently, and improving systems through continuous iteration and problem-solving.

Seeking opportunities to contribute to a dynamic team while further developing technical and product-building skills in real-world environments.

CORE COMPETENCIES

Digital Product Development

Building and managing web-based projects from concept to execution with focus on functionality and usability.

Problem Solving & Analytical Thinking

Identifying issues, analyzing system behavior, and implementing practical improvements.

Data & System Handling

Working with structured data, managing basic system workflows, and supporting platform operations.

AI-Assisted Development Workflow

Using modern AI tools to support development tasks, improve productivity, and accelerate delivery.

Self-Management & Adaptability

Independent work execution, time management, and adapting quickly to new tools and environments.

KEY PROJECTS

TaskAndReward

www.taskandreward.com

Personal Digital Project

- Built and launched a functional web-based reward and incentive platform from concept to live environment
- Managed overall platform structure and operational workflow
- Integrated external services to support platform functionality
- Performed ongoing updates, monitoring, and issue resolution to improve stability and user experience
- Focused on improving usability and maintaining system performance

EDUCATION

TS2 – Management Informatics

In Progress

First Year – Computer Science

Completed

LANGUAGES

Arabic: Native

English: Intermediate (Good reading & comprehension, basic speaking ability)
